

Gannon University in conjunction with GE Transportation has been offering an unique program for MS in Mechanical Engineering since 1997. The student works at GE Transportation located in Erie, PA on various projects 19 hours per week during the semester and 40 hours per week during the summer.

GE pays the graduate tuition, books, and fees for the student in addition to a salary of \$30,000 per year.

Each student works under the direction of a GE Transportation mentor (manager/engineer) and a Gannon faculty mentor.

After student completes his MS in about 1.5 to 2 years, GE will make an offer to the student, of course, based on their performance. There is no obligation on either party after graduation.

So far more than 250 students have completed the program. Except for 2000 (when a large number of students graduated), 95% of the students have been offered job after graduation by GE. More than 59% of them are still working with GE.

Currently we have 2 opening for students starting this spring. We will have more openings for May graduates (will post later on).

Interested students (Minimum GPA of 3.0) should submit an application package preferably by email (aggarwal@gannon.edu). The package should consist of a letter of intent (cover letter), a copy of their resume, names and addresses of three references, details of all major design projects including those performed during school, and a student copy of their transcript. The details of the project should include project title and summary, number of students involved, name of the project leader, your role in the project, and the final outcome of the project.
